Soft Constraints for Large Self-organizing Systems

Contents

1 Introduction **5**
1.1 Motivation 5
1.2 Contributions of the Thesis 5

2 Application Scenarios **7**
2.1 Distributed Power Systems 7
2.1.1 The Unit Commitment Problem 7
2.1.2 Complexity of the Problem 7
2.1.3 Related Work 7
2.2 Self-organizing Robotic Systems 7
2.2.1 Task Allocation in Reconfigurable Swarms [ECAS'16] . . 7
2.2.2 Self-organizing Resource-Flow Systems 7
2.2.3 Related Work 7
2.3 Preference-oriented Adaptive Systems 7
2.3.1 Exam Appointment Scheduling 7
2.3.2 Mentor Matching [Constraints'17]* 7
2.3.3 Multi-User Multi-Display Exhibitions [ModRef'15]* . . . 7
2.3.4 Related Work 7

I Soft Constraints for Corridors of Optimal Behavior **9**

3 Foundations **11**
3.1 Self-organization – Designing Systems to Adapt 12
3.2 Controlling Emergence – The Restore Invariant Approach 12
3.2.1 Corridors of Correct Behavior 12
3.2.2 Classical Constraint Programming for Combinatorial Problems 12
3.3 Over-Constrainedness in Practical Problems – From Correctness to Optimality 12
3.3.1 Partial Constraint Satisfaction 12
3.3.2 Specific Soft Constraint Formalisms 12
3.3.3 Algebraic Structures for Soft Constraints 12
3.4 Algorithms to Solve Soft Constraint Problems 12
3.4.1 Branch-and-Bound Search 12

3.4.2 Large-Neighborhood Search 12
3.4.3 Optimization in Constraint Programming Solvers 12
3.5 Modeling Languages 12
3.5.1 MiniZinc and MiniSearch 12
3.5.2 Essence 12
3.5.3 Numberjack 12

4 Soft Constraints with Constraint Preferences 13
4.1 Qualitative Specification using Constraint Preferences [SGAI'13]* 13
4.1.1 Syntax 13
4.1.2 Semantics – Dominance Properties 13
4.1.3 Transforming Constraint Preferences to Weighted Constraints 13
4.1.4 Evaluation in the Energy Scenario [SEN-MAS'14]* 13
4.2 Applications of Constraint Preferences 13
4.2.1 Distributed Energy Management [SEN-MAS'14]* 13
4.2.2 Multi-User Multi-Display Content Selection [ModRef'15] . 13

5 Designing Algebraic Structures for Soft Constraints [Constraints'17] 15
5.1 Abstracting Concrete Soft Constraint Formalisms – Requirements and Goals 15
5.2 Relationship of Constraint Preferences with General Formalisms [ICTAI'14]* 15
5.3 Building Algebraic Structures from Partial Orders 15
5.3.1 Free Construction of Partial Valuation Structures over Partial Orders [Constraints'17]* 15
5.3.2 Free Construction of C-Semirings over Partial Valuation Structures [Constraints'17]* 15
5.4 Mapping Organizations – Combinations of Preference Structures [Wirsing'15]* 15
5.4.1 Direct Product to Form Pareto-Orderings 15
5.4.2 Lexicographic Product to Form Hierarchical Precedence . 15

6 MiniBrass – A Modeling Language for Soft Constraints[Constraints'17]* 17
6.1 Workflow 18
6.2 Type Declarations 18
6.3 PVS Types with Example Usages 18
6.3.1 Comparative Specifications 18
6.3.2 Cost-based Specifications 18
6.3.3 Real-Valued Specifications 18
6.4 Operators – Direct and Lexicographic Products 18
6.5 A User-friendly Graphical Modeling Interface 18
6.6 Consistency Checks and Utilities 18
6.7 Soft Global Constraints 18
6.8 PVS-based Generic Search 18
6.8.1 Branch-and-Bound 18
6.8.2 Large Neighborhood Search 18
6.8.3 Adaptive Large Neighborhood Search 18

7 Evaluation **19**
7.1 Modeling Application Scenarios in MiniBrass 19
7.1.1 Unit Commitment in Distributed Power Systems 19
7.1.2 Task Allocation in Reconfigurable Swarms 19
7.1.3 Self-organizing Resource-Flow Systems 19
7.1.4 Multi-User Multi-Display Content Selection 19
7.1.5 Mentor-Matching and Appointment Scheduling 19
7.2 Benchmark Instances 19
7.2.1 Comparing Performance: Encoded Weighted CSP versus Native Toulbar2 19
7.2.2 Comparing Models: Smyth-Optimization versus Weighted-Optimization 19
7.2.3 Comparing Search Heuristics: Most Important First versus Default 19
7.2.4 Efficiency of Generic Heuristics 19

II Self-organized Hierarchical Power Systems **21**

8 Foundations **23**
8.1 Decentralized Power Management 23
8.1.1 Current and Future Power Management Systems 23
8.1.2 Smart Grids 23
8.2 Mathematical Programming 23
8.2.1 Linear Programming 23
8.2.2 Mixed Integer Programming 23

9 Autonomous Virtual Power Plants to Decompose Distributed Unit Commitment [Vw. Steghöfer,Anders,Siefert] **25**
9.1 Hierarchies of Autonomous Virtual Power Plants [Vw. Anders] . 25
9.2 Trust To Manage Uncertainty [Vw. Anders] 25
9.3 Soft Constraints in AVPPs [SEN-MAS'14]* 25

10 Supply Automata to Specify the Dynamics of Prosumers [TCCI'15]* 27
10.1 Challenges in Unit-Commitment 27
10.2 Existing Formulations 27
10.3 Automata-based Specification of Optimization Problems 27
10.3.1 Syntax 27
10.3.2 Semantics 27
10.3.3 Translation to Mixed Integer Programs 27
10.4 Examples 27
10.4.1 Modeling Cold and Hot Start-up 27
10.4.2 Scheduling a Biogas-Plant 27
10.5 Related Work 27

11 Abstraction of Collective Behavior [ICAART'14]* [TCCI'15]* 29
11.1 Obtaining Simple Representations of Production Spaces 29
11.2 Deriving Efficient Bounds for Future Time Steps 29
11.3 Calculating Approximate Functions for Collectives 29
11.3.1 Principle of Sampling Function Points 29

11.3.2 Selection by means of Active Learning [SASO'15']* 29
11.4 Relationship with Unit-Commitment Algorithms 29
11.4.1 Regio-Central Robust Optimization [SAOS'14] 29
11.4.2 Market-Based Robust Optimization [TAAS'15] [SASO'15] 29
11.5 Related Work 29

12 Evaluation **31**
12.1 Efficiency of Abstractions in a Regio-Central Setting [ICAART'14]* [TCCI'15]* 31
12.2 Efficiency of Abstractions in a Market-Based Setting [TAAS'15]* 31
12.3 Improving Accuracy of Sampling Abstraction by Active Learning [TAAS'15]* 31

13 Conclusion, Discussion, and Future Challenges **33**
13.1 Summary of Research Contributions 33
13.2 Open Research Challenges 33
*
